HUDSON PRINTING

Color Calibration Guide

Test Target File - Generic Overview

The chart shown below is a standard color swatch test file utilized by Hudson Printing. If you plan to use your own in-house proofing system for *initial* color, we recommend that you print out the file, IT87CMYK.tif, included with the download of this document on your printer. We will then send you a printout from either our AGFA Sherpa 43 Proofer, or Avantra 44S Imagesetter. After comparing the two prints together, preferably under a controlled lighting situation(6500K), make the necessary adjustment to your printing profiles to match our output.
